Brain Imaging Research on Math Abilities in Autism Spectrum Disorder

Do you have a child (ages 7 – 12) with high functioning autism (HFA) who would like to participate in a study about how the brain does math? If so, we would like to invite you to participate in the **Stanford Math Project**. The goal of our project is to increase our knowledge of brain structure and function in children and adults with HFA.

Participation involves a neuropsychological assessment and a MRI scan. During the MRI scan, participants will respond to computer-based tasks while pictures of their brain are taken. An MRI scan is a safe, non-invasive procedure that does not use x-rays or radiation.

Volunteers will be paid \$100 upon completion of the two sessions and will receive results of the assessments and pictures of their brain to take home.

If you are interested in participating or have questions, please contact smp@med.stanford.edu or (650) 736-0128. You can also visit our website at <http://smp.stanford.edu> for more information related to participation.

For further information regarding questions, concerns, complaints, about the research or your rights as a research study subject, please contact the Stanford Institutional Review Board (IRB) to speak to an informed individual who is independent of the research team at (650)-723-5244, call toll free at 1-866-680-2906, or write the Stanford IRB, Administrative Panels Office, Stanford University, Stanford, CA 94305-5401.
